Sustainable Catalyst

Open Source Notice — Licensing, Governance & Responsible Reuse

1. Open Source Philosophy

Sustainable Catalyst publishes code and documentation under open licenses to promote transparency, auditability, and collaborative improvement. Open systems support institutional trust by allowing methods, assumptions, and implementations to be inspected rather than obscured.

2. Licensing Structure

- Code is released under the MIT License unless otherwise noted.

- Documentation may be released under a permissive documentation license when specified.

- Third-party dependencies retain their original licenses and attribution requirements.

- Each repository or file header governs in case of conflict.

3. Attribution Requirements

- Preserve copyright notices and license text.

- Clearly document modifications in derivative works.

- When feasible, link back to the original repository or document source.

4. Responsible Use

- Do not misrepresent outputs as guarantees or definitive conclusions.

- Preserve uncertainty, assumptions, and methodological context.

- Avoid uses that enable harm, deception, or distortion of evidence.

5. Trademark & Identity

The Sustainable Catalyst name, logo, and associated brand assets are not covered by the MIT License. Open-source code may be reused under license terms, but the brand identity may not be used to imply endorsement, partnership, or official status without written permission.

6. No Warranty & No Support Obligation

- Open-source materials are provided 'as-is' without warranty.

- There is no obligation to provide maintenance, updates, or support.

- Use of the software and documentation is at your own risk.

7. Contribution & Governance

Community contributions, issue reports, and improvements are welcome where repositories are open for collaboration. Governance decisions regarding roadmap direction remain with Sustainable Catalyst unless explicitly stated otherwise.
